Hi,

Thanks you for posting here.

From your description, I understand this issue is: Using KB 884453 "How to install Small Business Server 2003 in an existing Active Directory domain" to migrate from SBS 2003 to SBS2003, in this period, you can't achieve this goal due to specific reason and posted it back, currently you can not access companyweb and in IIS console he encountered "IIS was unable to start this site. Another site may already be using the port you have configured for this site. Please select an unused port for this site".

First I want to emphasize we do not recommend customer use this article to add an SBS 2003 computer to a network where there is an existing SBS 2000 or SBS 2003 domain controller for migration purposes.

Based on my experience, please re-run CEICW wizard to configure your SBS Server.

More info please refer to following MS knowledge base article:

825763 How to configure Internet access in Windows Small Business Server 2003

<http://support.microsoft.com/?id=825763>

To do so:

1. On the Small Business Server 2003 computer, click "Start", and then click "Server Management".
2. Expand "Standard Management", and then click "To Do List".
3. In the right pane, click "Connect to the Internet", and then click "Next".
4. On the "Connection Type" page, click "Do not change connection type",

RE: Cannot access companyweb

and then click "Next".

5. On the "Firewall page", click "Enable firewall", and then click "Next".
Important Do not click the "Do not change firewall configuration" option.

6. If you receive the following message, click "OK":

To ensure the proper configuration of ISA Server, existing custom packet filters will be disabled. For information on how to re-enable existing packet filters, see Small Business Server Help.

7. On the "Services Configuration" page, click to select the check boxes of the additional services that you want to make available from the Internet, and then click "Next".

h. On the "Web Services Configuration" page, click "Allow access to only the following Web site services from the Internet", click to select the check boxes of
