Hi Psiuyo,

Thanks for your update. I appreciate your time. I am sorry for the delayed response due to my sick leave and weekend.

Based on my research, this is a reported problem for the Windows 2003 SP1. The issue will be fixed in the Vista. Thanks for your understanding.

We can use the following method to workaround the issue:

1. Stop explorer.exe (using TaskMgr for example).
2. Delete the registry key values: "Taskbar" and "TaskbarWinXP" under the following regkey (if they exist):

HKEY\_CURRENT\_USER\Software\Microsoft\Windows\CurrentVersion\Explorer\Streams\Desktop

3. Restart explorer (using TaskMgr for example).

Then please test the issue again and let me know the result.

Have a nice day!

Sincerely,

Jenny Wu

Hi, thanks for the response. I've answered the Qs and attached a couple nfo files and a ss so you can see the problem. Also, in addition to sometimes adding new language bars, they also tend to move around from logon to logon, shifting left and right along the taskbar.

1) Both the Windows 2003 Standard servers and the SBS2003 are all at SP1 with the most recent updates applied. We are using any citrix software, and the problem is the complete opposite than described in that KB918184.

2) We generally don't use any accounts on the servers aside from Administrator, but doing a quick test with another Domain Admin account doesn't seem to raise the issue, but it's hard to say since I'm not exactly sure what causes it in the first place.

3) No, only appears to happen on the 2003 servers (\*\*Note, all 2003 servers are DCs, we don't have any 2003 non-DC servers to test with)

4) No roaming profiles or redirects of any sort

5) Rebooting and disabling all nonMS services makes no difference. Also, new servers have been built on different hardware and they all exhibit the same issues without any third party products installed.

Doesn't matter which clients we log in from either.

6) Emailed

7) Emailed, also you can view here

[http://www.sefia.ca/images/lang\\_bar\\_broken.png](http://www.sefia.ca/images/lang_bar_broken.png)

Hi Psiuyo,

Thanks for using the SBS newsgroup!

I am sorry for the delayed response due to weekend. Please understand

that

the newsgroups are staffed weekdays by Microsoft Support professionals to answer your systems and applications questions. Your understanding is greatly appreciated!

From the description, I understand the issue is that there are many

copies

language bar and other items copies showed in the taskbar when you RDP to the Windows 2003 server or an SBS 2003 server. If I am off base, please don't hesitate to let me know.

The issue is indeed specified. Let us perform the following tests to trouble shoot the issue:

Re: Multiple copies of the Language Bar

1. What is the service packs level of the terminal server. Have you

applied

the Windows 2003 SP1 to the terminal server? Please check into the following article to see if it is the resolution.

The Windows Language bar closes unexpectedly when you start a Citrix Presentation Server–published application on a Windows Server 2003 SP1–based computer that runs Terminal Services  
<http://support.microsoft.com/?kbid=918184>

2. Does the issue happen on the specific user account or all user

accounts?

Please close all RDP sessions on both servers and try to RDP to them with other user accounts to test the issue, what is the result? And please try to create a new domain admin using Add user wizard and then test the

issue,

what is the result?

3. Does the issue happen when you RDP to XP workstations?

4. Have you enabled roaming profile of the problematic user account?

5. Please book a non–business time and perform a clean boot on the server box and test the issue again to see if it helps. A Clean Boot will allow

us

to isolate any device drivers or programs that are loading at startup

that

may be causing a conflict with other device drivers or programs that are installed in your computer.

- 1) Run MSCONFIG.EXE.
- 2) In the Services tab, click "Hide All Microsoft Services" and click "Disable All".
- 3) In the Startup tab, click "Disable All". Click OK. (This will temporarily prevent third–party programs from running automatically

during

start–up.)

- 4) Restart the computer and check whether the problem still persists.

Re: Multiple copies of the Language Bar

If the problem does not occur, it indicates that the problem is related

to

one application or service we have disabled. You can use the MCONFIG

tool

again to re-enable the disabled item one by one to find out the culprit.

6. Please run command "msinfo32" (no quotation marks) on the SBS server

box

and the Windows 2003 server to launch System Information console. And

click

File and then Save. Save the system information to a .nfo file to send to me. My working mailbox: v-yanniw@xxxxxxxxxxxxxx

7. Please capture some screen shots of the symptom and send to my working mailbox: v-yanniw@xxxxxxxxxxxxxx for analyze.

I appreciate your time. I am happy to be of assistance to you and look forward to your reply.

Have a nice day!

Sincerely,

Jenny Wu

Hi, I have a problem exactly as described in this thread from  
a few  
months ago:

[http://groups.google.ca/group/microsoft.public.windows.server.sbs/browse\\_th](http://groups.google.ca/group/microsoft.public.windows.server.sbs/browse_th)

read/thread/f0a9239e36885693/4fa0074929a26f49?lnk=st&q=&rnum=1&hl=en#4fa0074

929a26f49

Whenever I use RDP to connect to a Win2k3 or an SBS2003  
server I seem  
to gather more and more copies of the language bar in the  
taskbar, as  
well the other items (quicklaunch, normal program aread) get  
shuffled  
around and shifted. I can close them off but they come back  
after a  
few more RDP connections. There was no resolution in the  
above linked

Re: Multiple copies of the Language Bar

thread so I was hoping someone could shed some light on  
this? Thanks
