You say you have two nics...does that mean you have Premium Edition?

Cris Hanna [SBS-MVP]

Please do not respond directly to me, but only post in the newsgroup so all can take advantage "SBS 2K3 Novice" <SBS2K3Novice@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message <news:7C6A65E9-3388-4C6C-A1D2-CFDDCDD9A917@xxxxxxxxxxxxxxxx>

This one is frustrating.

I have just reconfigured to a two NIC system. All working well expect...

Prior to the 2 NIC scenario it was a single NIC with all the client obtaining their access to the web via a direct route to the gateway router on my broadband. I was able to most anything I wanted including uploading files via FTP to my website. Since going dual NIC, I now can access my website (remote website) via ftp. See all the files and browse the folder structure. I can download files to my client OK. However when I come to upload a file to the site – I can't, it fails saying

"An Error occurred copying a file to the FTP Server. Make sure you have permission to put files on the server.

Details

200 Type is now 8 bit binary
227 Entering Passive Mode (213,171,193,5,179,102)
550 Access is denied"

My hosting provider has checked my website and claims to be able to upload files just fine using ftp.

Am I losing the plot here or does this sound more like an external ftp issue than an SBS/ISA issue?

Thanks
