Hi Dev,

Thanks for your suggestions.

1 – Disable Netbios on external NIC : Already configured that way

2 – File and printer sharing is already disabled. Only TCPIP is selected on External NIC, and Netmon Network Packet Driver.

3 – Under TCPIP Properties/Advances/DNS tab – the Internal NIC is set to "Register this connections address in DNS" – How can I check if it's trying to register with external DNS? (I assume you mean external DNS = ISP DNS server?)

3b – "Put the external DNS servers to internal DNS forwarders." – I'm not sure what you mean by this exactly. Are you saying the external (ISP) DNS servers should be manually entered in to SBS's own DNS records?

Thanks,

Mark

Hi ,

One morething I forgot ,

Remove WINS server from the card properties.

Microsoft EPS

Re: Event 15108 – ISA Server detected a spoof attack..

DEV wrote:

Disable NetBIOS on the External ISA NIC
so that it should not register
in the Internal DNS.
Uncheck file and printer sharing on the
external card
Set the internal NIC to no longer register
with any external DNS and
put the external DNS servers to internal
DNS forwarders.
Restart all the ISA services.

Error message should stop.. if not lemme know..Will provide you with
some more steps
