Hi all,

an ex contractor has changed the login password for our SBS2003 server, not only that but he has added a batch file to invoke if we try to reset the passwords and login as administrator, see note below.

Is this possible and is there anyway around this?

Your urgent assistance is greatly appreciated.

Regards
Simon Gare

Nicholas Jaffe wrote

" you want your application back. Don't ask Pipex to recover the passwords, logging in as Administrator will invoke the startup batch files, which will put you in an even worse position than you are already in.

Nick"
