Hi,

SBS2003 SP1 without ISA firewall, single NIC setup. Server behind DLink DI-704P router.

Having trouble connecting using the Remote Connection Manager, tries to connect, hangs on "Verifying password".

Only want to allow clients to connect using Connection Manager, not RWW. Have forwarded port 1723 TCP to SBS, but not sure if router supports GRE protocol. Does this sound like data isn't able to transmit using this protocol?

DLink router has option to "Allow PPTP VPN Pass Through", have set this to enabled. Is this setting more for letting clients behind this model of router connect to a VPN?

Any help would be greatly appreciated.

Regards,
EightBall.
