Thanks Chace, But is there a way for me to determine who is going to what websites. I.e. User\Computer has been visiting www.movies.com, www.espn.com, etc. Basically a report that lists websites visited.

Thanks again,

Hi,

Thank you for posting here.

From you post, I understand that you want to view Remote Connection information in server usage report.

First, I want to know what website you want to monitor.

Actually there are two kinds of Usage report. Basic Usage Report and Extended Usage Report.

Open you Server Management Console on your SBS Server.  
Locate Monitoring and Reporting node. Click View Usage Report, and then click Create New Report.  
Select Show Extended Usage Report (Web, e-mail, remote connections and fax ) and click create report.

Check the results and see if any change

Actually, the usage data collection is triggered by a Task Scheduler task called Collect Usage Data (%sbsprogramdir%/monitoring\mssbssr.exe -usage). It's scheduled to run daily at 4:30 A.M., and it gathers Internet, e-mail, OWA, remote access and fax statistics, and then places that data into the database.

As for Internet Statistics:

Data is collected via ports 80 and 443, and only web browsing from clients

## RE: Website Monitoring

is monitored; data from web browsing on the server is not collected. Information for data collection is available from RRAS connection events; these events are gathered by Web Usage Logging Service (WBLogSvc). Events are stored in memory until the 8K buffer is filled or until an hour has passed, whichever occurs first. At that point it is appended to a log file, %windir%\temp\WebEvt.log, which will be created if it does not exist.

As for OWA Statistics:

OWA data is collected from IIS log files. The logs are stored in the %windir%\system32\LogFiles\W3SVC directory. Only the lines in the log files that satisfy the following criteria will be stored in the database:

CS-URI-Stem is in the /exchange/ path

CS-Method not equal to POLL

SC-Status is in the 200-299 range (200 <= sc-status <= 299)

User name in CS-UserName column (lines with C as user name should be discarded)

As far as I know there is no specific log file forcing on Remote Web Workplace. The only way is check IIS log.

IIS logs

=====

1. Open IIS.
2. Locate Default web site. Right-click it and then click Properties.
3. Click to selected Enable logging and then click properties.
4. Click Advanced.
5. Click to select every checkbox here.
6. Click OK to close these windows.
7. Reproduce this action and open it.

NOTE: The log files are located at %systemroot%\System32\LogFiles by default.

Hope this helps. If you have any other concerns on this issue, please feel free to let me know.

Have a great weekend!

Best Regards,

Chace Zhang (MSFT)

RE: Website Monitoring

=====  
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

RE: Website Monitoring

|  
| I know the server usage report gives you basic information on website  
| traffic, but is there anyway to track what websites are being visited by  
| each  
| computer. Any way to configure or get the logs that provide more  
| detailed  
| information?

|  
| Thanks,  
|
