Thank you very much for your support.

Yes it was Wingate that was creating the problem. I reinstalled it and now its fine. Thanks once again.

See you soon

bye

We were all newbies at one time, and with every new feature and release, we become newbies once again.

The DHCP issue is a common one, and now that you know it, hopefully you'll be able to help someone else down the road when they have the same issue/problem.

I am a newbie, so forgive me if this is not right, but I have drilled this into my own head. SBS2003 will not work in an environment with a DHCP server other than its self. In fact I had a client who tried to install a OEM SBS2003 server and it (The SBS2003) found a Verizon Modem running a DHCP server on it and it took more than 8 hours to find the real problem (The modem) and once it was unplugged from the network the SBS Server 2003 worked like a pro at 100%.

Does this hold water for you??? I hope so, Glad I could pass on my knowledge...

Re: Please help me Urgent

Thank you for all your help. With out people like you we would all be in the dark. I will be sure to pass on any information you care to share with me.

I had recently add a Windows Server 2003 web edition to my network. Its

runnign a Proxy Server program (Wingate v6.4) for Internet Connection Sharing over my LAN. It also runs an Email Server (Mdaemon v9.0.

And I already have a Windows 2000 server which is running a Dhcp Server. The problem is IP address of my dhcp clients automatically gets the IP Address of the

Windows Server 2003 system as default gateway, which is happening only after installing the Windows 2003 machine. How does this happen? can anyone tell me please, coz i am not able to access the internet over the LAN. Please help me Urgent

I have installed a WIndows Server 2003 Web edition
