Hi Crina. Thanks for your time and advice.

A. Time Service enabled and started. Yes – verified initialli and after D. below.

B. IS is not installed. Control Panel->Add/Remove programs. The list produced does not include "Microsoft Internet Security and Acceleration Server", so ISA is not present.

C. Re-Configure. Did that and all commands completed successfully. Still getting error ID 29 (wait 5 min after the action and the erro shows again on the System Event Viewer)

E. Hot fix 830092. THis was installed months ago and shows up in the Control Panel->add/Remove programs list.

D. H/W router/firewall.
We have an adsl router, the gateway.
The Type value was NTP. Changing it to Nt5DS had no effect.

So I have no progress.
Any other suggestions?

Kind regards
Russell

Hi Russell,

Thank you for posting in SBS newsgroup.

I am sorry for the delayed response due to weekend. Please understand that the newsgroups are staffed weekdays by Microsoft Support professionals to answer your systems and applications questions. Your understanding is greatly appreciated!

From your description, I understand the issue to be: you receive event 29 regarding w32time. If I have misunderstood your concerns, please do not hesitate to let me know.

Based on my experience, I would like to suggest you try the following suggestions:

A. Make sure the Windows Time service is enabled and started

The Windows Time service will be disabled by CEICW when you have a PPPoE connection which is treated as a non-stable connection. I suggest you click Start->Run, type "services.msc" (without the quotes) and click OK. When the Services snap-in opens, check to make sure the Windows Time service is started and its startup type is set to "Automatic".

B: Make sure ISA is allowing the NTP traffic on UDP port 123 (if you have ISA installed)

If you have ISA server 2000 installed on the SBS 2003 server, please perform the following steps to configure ISA:

1. In the ISA Server management tool, expand the management nodes that are beneath your server name.
2. Expand the Access Policy branch to view the list of access policies.
3. Right-click IP Packet Filters, point to New, and then click Filter to start the New IP Packet Filter Wizard.
4. Type a descriptive name for the filter (such as "SNTP Allow Filter" (without the quotation marks)), and then click Next.
5. Click Allow packet transmission as the Filter Mode, and then click Next.
6. Click Custom as the filter type, and then click Next.
7. On the Filter Settings page, click UDP for the IP protocol, click "Send receive" for the direction, "All ports" as the local port, click "Fixed port" as the remote port, use port 123 as the remote port number, and then click Next.
8. Keep the default settings by clicking Next through the next two wizard pages, and then click Finish at the Completing The New IP Packet Filter Wizard page.
9. Go to Monitoring\Services and restart the Firewall service. Check if the issue disappears.

For more info, see:

323621 How To Configure the Simple Network Time Protocol (SNTP) on ISA Server

<http://support.microsoft.com/?id=323621>

887355 The server cannot synchronize with an external time source after you run the Configure E-mail and Internet Connection Wizard on Windows Small Business Server 2003

<http://support.microsoft.com/default.aspx?scid=kb;EN-US;887355>

If it is ISA 2004, open the ISA management console, go to Firewall Policy, right click the "SBS Local Host Access Rule" in the right panel, and select Properties. Go to Protocols tab to make sure NTP (UDP) is added.

C. Re-configure the Windows Time service

Open a command prompt and run the following commands to re-configure the time service to sync time with time.nist.gov:

```
w32tm /config /manualpeerlist:time.nist.gov,0x8 /syncfromflags:MANUAL
```

```
w32tm /config /update
```

```
net stop w32time
```

```
net start w32time
```

D. Make sure the hardware router or firewall is allowing the traffic

Check if you have a hardware router/firewall in front of your SBS server, if so, please open Registry Editor (regedit), go to HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Parameters\Type, change the value data from whatever to Nt5DS and restart the W32Time service. Make sure the service's startup type is still set to automatic.

| In system event viewer I have the following error message:

| Event ID 29

| The time provider NtpClient is configured to acquire time from one or more

| time sources, however none of the sources are currently accessible. No attempt to contact a source will be made for 15 minutes. NtpClient has no source of accurate time.

| My timezone is New Zealand Daylight time.

| I have had this error since settign up SBS 2003. Serching this list I have

| found advice and none of the methods suggested have removed the error.

| For example I have tried running this script on the server"

| w32tm /config /manualpeerlist:time.windows.com,0x8 /syncfromflags:MANUAL

| w32tm /config /update

| net stop w32time

| net start w32time

| w32tm /resync /nowait

| The error persists. I welcome any advice.

| Thanks,

| Russell
