Hi, all

I needed to alter our backup settings to save fewer backups due to space considerations. However, once the Wizard completes, it demands a verification using username/password. The username/password is not accepted and after a few tries, the following pops up. I also recall similar happening with some of the other Wizards several months ago, but I can't remember which — oh yeah... Trying to set up/manage the CompanyWeb does the same thing, though with a different error (available on request.) Is it possible that some other username/password combo is being requested besides our administrator logon? Or is something just screwed up?

Note that when I look for

"C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET Files\backup\55b79170\2502a0a", \Temporary ASP.NET Files\ is as far as I get. The rest of the path doesn't exist. Far as I can tell, these are two different problems: One is that Backup isn't getting configured/enabled properly (due to username/password not being accepted), and the other is that the Server Management page is failing to show the results of the operation. But perhaps I'm wrong?

Weirdly enough, the Backup task appears, suitably amended, in Scheduled Tasks, but it doesn't run except manually. I'm lost!

Here's the error page:

Server Error in '/Backup' Application.

Access to the path "C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET Files\backup\55b79170\2502a0a" is denied.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.UnauthorizedAccessException: Access to the path

Can't configure backup...

"C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET Files\backup\55b79170\2502a0a" is denied.

ASP.NET is not authorized to access the requested resource. Consider granting access rights to the resource to the ASP.NET request identity. ASP.NET has a base process identity (typically {MACHINE}\ASPNET on IIS 5 or Network Service on IIS 6) that is used if the application is not impersonating. If the application is impersonating via <identity impersonate="true"/>, the identity will be the anonymous user (typically IUSR_MACHINENAME) or the authenticated request user.

To grant ASP.NET write access to a file, right-click the file in Explorer, choose "Properties" and select the Security tab. Click "Add" to add the appropriate user or group. Highlight the ASP.NET account, and check the boxes for the desired access.

Source Error:

An unhandled exception was generated during the execution of the current web request. Information regarding the origin and location of the exception can be identified using the exception stack trace below.

Stack Trace:

```
[UnauthorizedAccessException: Access to the path
"C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET
