Did you come to a solution with this issue? What did the problem come out to be?

If you could share that would be great as we are running into the same issue with one of our users.

Thanks in advance for your help!!

I have an other user who is having the same problem, a total of 2 users. Any one from Microsft can help me??

computertechct@xxxxxxxx wrote:

There was a typo in the original message..

DNS in DHCP scope is pointing to SBS, NOT the ISP DNS. So we have no issue there.

computertechct@xxxxxxxx wrote:

Hi,

I am hoping one of the experts on here can point me to the right solution.

We have SBS and 10 users. Roaming profiles on the server. DHCP, DNS all on SBS
DNS in DHCP scope is pointing to the SBS, on ISP DNS. I

Re: One user cannot access Server Shares/connect to Exchange server

can safely rule
out DNS as the problem

One user can log into her workstation, but can only login
after a long
while because windows cannot find the roaming profile and
is trying to
login with a local copy.

It looks like somehow her account will not authenticate to
the DC to
access shares & exchange.
We tried logging into another workstation with the same user
account.
Same behavior. Same errors. However other users can login
and check
their email and access network shares with out a problem.
This makes me
conclude that there is something about her account that is
messing
things up. I did not change anything on her account in AD. I
disabled
trendmicro services on the workstation and that did not
change a thing.

She can use webmail to check her email? That works fine. I
am stumped.
Please help.

Here are all the logs related to this.

Application log
Event ID: 1521

Windows cannot locate the server copy of your roaming
profile and is
attempting to log you on with your local profile. Changes to
the
profile will not be copied to the server when you logoff.
Possible
causes of this error include network problems or insufficient
security
rights. If this problem persists, contact your network
administrator.

DETAIL – The system detected a possible attempt to
compromise
security. Please ensure that you can contact the server that
authenticated you.
