Ok, looking at the logs gives me some more info..

User host/hellknight.hellmouth.local was denied access.
Fully-Qualified-User-Name =
hellmouth.local/MyBusiness/Computers/SBSComputers/hellknight
NAS-IP-Address = 192.168.0.254
NAS-Identifier = <not present>
Called-Station-Identifier = <not present>
Calling-Station-Identifier = 00-0F-3D-AA-09-5B
Client-Friendly-Name = di-634m.hellmouth.local
Client-IP-Address = 192.168.0.254
NAS-Port-Type = <not present>
NAS-Port = <not present>
Proxy-Policy-Name = Use Windows authentication for all users
Authentication-Provider = Windows
Authentication-Server = <undetermined>
Policy-Name = Connections to other access servers
Authentication-Type = EAP
EAP-Type = <undetermined>
Reason-Code = 65
Reason = The connection attempt failed because remote access permission for the user account was denied. To allow remote access, enable remote access permission for the user account, or, if the user account specifies that access is controlled through the matching remote access policy, enable remote access permission for that remote access policy.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

I thought the computer was being authenticated, so I don't know how I can enable remote access for the computer account. Any ideas?

Andy
