Mark

Be sure you list the SBS Server along with the WS you want the user to login to IF you want the user to have access to RWW and/or OWA remotely. As a User they will still not be able to log on to the server console but need that right for RWW/OWA to work.

Phil,

Yes, this is exactly what I was looking for. Thank you for the information.

Hi,

If you want to set up a particular user account to logon only to a specific computer simply do this in Active Directory Users and Computers:

- Create the User account
- When done, go to the user account properties
- Select the "Account" tab
- Click "Log On To.." button
- In there you can specify which computers that user account is able to logon to. By default "All Computers" is selected.

Hope this helps!
