Hi,  
Thanks for answer.  
I'll post also on WSUS.

How do you explain the fact that WSS 3.0 setup stop IIS Default web that run on port 80 and install it self on that port? So now <http://sbsname> redirect to WSS 3.0.

Is there a way to force WSS installation on other port than 80?  
I'll use your recomandation an go back to inform you  
Thanks and regards  
Thierry

Hello Customer,

Thank you for posting here.

According to your description, I understand that you can not use WSUS to update clients after install WSS 3.0. If I have misunderstood the problem, please don't hesitate to let me know.

It is mostly like a WSUS problem.

First, I have to confirm which document you consulted side by side to install WSS 3.0

Installing Windows SharePoint Services 3.0 on a Server Running Windows Small Business Server 2003  
<http://www.microsoft.com/downloads/details.aspx?FamilyID=0daafc81-efff-4f5b-a28a-8265f1e99f5b&displaylang=en>

If you consulted the above document, there is no problem about WSS 3.0 installation. And this is a WSUS problem. Please repost your issue in WSUS newsgroup for further assistance.

RE: WSS 3.0 – WSUS and default web site issue in R2

This newsgroup is primarily for issues involving deployment, configuration, consultation and troubleshooting. The reason why we recommend posting appropriately is you will get the most qualified pool of respondents, and other partners who read the newsgroups regularly can either share their knowledge or learn from your interaction with us.

WSUS Newsgroup: microsoft.public.windows.server.update\_services

If you did not consult this document, please try to go through this document and install the WSS 3.0 again.

If the issue persists, please kindly help me collect some information for further investigation:

1. Gather IIS log:

a. Open IIS snap-in.

b. Right click Default Web Site and click Properties.

c. Uncheck the "Enable Logging" box and click Apply.

d. Go to C:\WINDOWS\system32\LogFiles\W3SVC1 folder and move all files to a backup location.

e. Check "Enable Logging" box and click OK.

f. Run IISReset command.

g. Reproduce the problem and send the log file in C:\WINDOWS\system32\LogFiles\W3SVC1 folder to me for research.

2. Gather IIS Metabase:

1) Download the IIS Resource Kit tools from the following page:

<http://www.microsoft.com/downloads/details.aspx?FamilyId=56FC92EE-A71A-4C73-B628-ADE629C89499&displaylang=en>

2) Install it, run MBExplorer (Metabase Explorer)

3) Right click the "LM" node and choose "Export to file".

4) Specify a file name, specify the password and finish the export.

5) Send the file and the password to v-terliu@xxxxxxxxxxxxxx

I hope the information above is helpful.

Thanks and have a nice day!
