-

Hello Cheryl,

Thank you for kind update.

Step 1:

Set the My Documents Folder not Private

To set the My Documents folder to Private :

1. On the Start menu, right-click My Documents , and then click Properties
..
2. Click the Sharing tab, and then do not select the Make this folder private.
3. Click Apply , and then click OK .
4. Please also send the Temporary Internet Files folder not private.

Step 2:

1. On the client computer, quit the Windows Small Business Server Network Configuration Wizard if it is running.
2. Start Windows Explorer, and then open the SBSNetSetup.log file by using a text editor such as Notepad. This file is located in the following folder on the client computer:

%ProgramFiles%\Microsoft Windows Small Business Server\Clients

3. Examine the log file for information that is similar to the following:

```
CProfileList::IsPrivateProfile( <UserName> )
CProfileList::IsPrivateProfile() – starting the search [C:\Documents and
Settings\<UserName>]
CProfileList::IsPrivateDir() – returning TRUE for [C:\Documents and
Settings\<UserName>\Local Settings\Temp\JunkFiles]
CProfileList::FindPrivateDir() – returning true [C:\Documents and
Settings\<UserName>\Local Settings\Temp\JunkFiles]
```

RE: Private settings on my laptop

In this log file, the last two lines return a value of True for private files in the temporary folder of the affected user's profile.

4. Delete the files that the SBSNetSetup.log file indicates are private from the user's profile. In the example log file from step 3, remove the files from the affected user's JunkFiles folder.

5. Quit Windows Explorer.

6. Visit the following Web site to migrate the user's profile to Windows Small Business Server 2003:

<http://ServerName/ConnectComputer>

Note: Replace ServerName with the name of your Small Business Server 2003 computer.

If it does not work, I suggest we try to manually copy the profile.

1. When run connect computer wizard, please do not select "Assign Users to this Computes and Migrate their Profiles". The new profile will create for the domain account.

2. After finish the connect computer wizard, please try to copy the profile you want and overwrite the domain user's profile.

For detail info please go through the KB:

How to restore a user profile in Windows 2000

<http://support.microsoft.com/?id=314045>

Hope these steps will give you some help.

Thanks and have a nice day!

Best regards,

Terence Liu(MSFT)

Microsoft CSS Online Newsgroup Support

Get Secure! – www.microsoft.com/security

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader,

RE: Private settings on my laptop

RE: Private settings on my laptop

please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| Okay.. I keep trying here!

| Each time I get the "user profile marked private" message, I go into the
| SBSnetsetup.log file to read what is coming up private. As new lines
| appeared, I went, found that folder and while none were marked private, I
| shared the folder anyway. BUT... for the last 5 or 6 times, I keep
| seeing
| these lines in the log:

RE: Private settings on my laptop

RE: Private settings on my laptop

|
| CProfileList::IsPrivateDir() – returning TRUE for [C:\Documents and
| Settings\Cheryl\Local Settings\Temporary Internet Files\AntiPhishing]
| CProfileList::FindPrivateDir() – returning true [C:\Documents and
| Settings\Cheryl\Local Settings\Temporary Internet Files\AntiPhishing]
|
| NO MATTER how many times I empty the TIF and all offline content, I still
| get this line. EVEN when the folder or file does NOT EXIST, I still get
| it.
| HELP!!!!!!!!!!!!!!
|
| (by the way simple file sharing is disabled)
