dunno why you're mentioning policies.

The policy errors below indicate the SBS is having a hard time talking to itself, or could be poor performance in that queries to AD are timing out.

"Justin Brown – SYNACS" <[jcbrown@xxxxxxxx](mailto:jcbrown@xxxxxxxx)> wrote in message [news:1168048576.554996.49040@xx](mailto:news:1168048576.554996.49040@xx)

It's an interesting thought, although I presume that any user account, including this hypothetical admin account, would still be subject to the Default Domain Policy and Default DC Policy assuming the User portion has some settings defined.

SuperGumby [SBS MVP] wrote:

something else I haven't got around to confirming is the effect on SBS of deleting the admin profile but this set of circumstances would have me creating another domain admin (directly in ADUC, no wiz) and using it to at least move all 500 profiles, see if 500 signon then works normally.

"Justin Brown – SYNACS" <[jcbrown@xxxxxxxx](mailto:jcbrown@xxxxxxxx)> wrote in message [news:1168039654.286269.83680@xx](mailto:news:1168039654.286269.83680@xx)

I guess a better question would be, have you run RSoP against your administrator logon to see which group policy objects are applied?

Justin Brown – SYNACS wrote:

I see the same CMD dialog at every logon, both in Windows XP and in SBS. If I think about it, client setup wizard probably runs on the server, as well, though I couldn't begin to tell you what it does.

Re: Administrator Profile corruption

Where do you find the administrator account  
in Active Directory Users  
and Computers?

Andre wrote:

Thanks for your reply  
Justin,

The answer to your question  
is no.

However maybe this is a  
clue: When I RDP into  
server login, I get  
the  
error  
"client setup Wizard..the  
system cannot copy a file  
from the server  
to  
this  
computer.  
Make sure that network  
cable and devices are  
plugged in and  
functioning  
properly and try again to  
join this computer to the  
network"

However this is the DC so it  
would not require the 'client  
setup  
wizard' I  
also know for a fact that it's  
not a network problem as I  
am coming  
in  
over  
the wan.

Also a cmd prompt is running  
in the background with the  
following:

```
'C:\Documents and  
Settings\administrator.clc.002>\\CLCHOMEPC\Clients\Setup\setup  
.exe /s CLCHOMEPC'
```

Re: Administrator Profile corruption

I'm on administrator.clc.006  
it just creates a new profile  
everytime  
login.

I am beginning to think it's  
not profile corruption, but a  
different  
problem  
maybe some script or  
policy.

Also under GPO Policy  
Events I'm getting  
EVENTID 1097 ' Windows  
cannot  
find  
the machine account, Not  
enough storage is available  
to process this  
command.'

as well as EVENTID 1030  
'Windows cannot query for  
the list of Group  
Policy  
objects. Check the event log  
for possible messages  
previously logged  
by  
the  
policy engine that describes  
the reason for this.'

Think I'm getting closer but  
need help on this one.

Does this  
domain use  
roaming  
profiles via  
Group  
Policy? If

Re: Administrator Profile corruption

so, was  
the  
administrator  
account  
mistakenly  
included in  
the roaming  
profiles  
group?

Andre

Hi  
I  
have  
a  
problem  
on  
2003  
SBS.

Everytime  
I  
login  
It  
creates  
a  
new  
profile  
name.  
eg:  
admin.001  
.admin.002  
admin.003  
ect  
ect.

I  
realise  
that  
the  
original  
profile  
is  
corrupt  
however  
why  
does  
it  
continue

Re: Administrator Profile corruption

to  
recreate  
a  
new  
profile  
everytime  
I  
login?

In  
the  
H\_KEY  
LOCAL  
MACHINE/Sotfware/Microsoft/Wondowsnt/currentversion/p  
I'm  
currently  
at  
administrator.005

Everytime  
I  
login  
it  
will  
replace  
the  
previous.  
How  
can  
I  
stop  
this  
from  
happening?

I  
have  
come  
across  
this  
problem  
before  
on  
XP  
but  
never  
on  
a  
DC.

Re: Administrator Profile corruption

It's  
on  
a  
production  
network  
so  
I  
have  
to  
get  
this  
right  
1st  
time.

Please  
help  
if  
you  
know  
the  
solution.

Thanks  
Andre
