Michael Tovey wrote:

Hello all,

I have what i think is a very big problem.

I have come in this morning to find that Our SBS server is powered down.... After carming the MD down and unplugging the power and leaving for a min' I got the server back up and running. I checked the Logs on the server and found some very strange errors, like the below.

"The configuration information of the performance library "C:\WINDOWS\system32\inetsrv\w3ctrs.dll" for the "W3SVC" service does not match the trusted performance library information stored in the registry. The functions in this library will not be treated as trusted.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

"The data buffer created for the "MSExchangeIS" service in the "C:\Program Files\Exchsrvr\bin\mdbperf.dll" library is not aligned on an 8-byte boundary. This may cause problems for applications that are trying to read the performance data buffer. Contact the manufacturer of this library or service to have this problem corrected or to get a newer version of this library.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

"A provider, PerfProv, has been registered in the WMI namespace, ROOT\CIMV2\MicrosoftHealthMonitor\PerfMon, but did not specify the HostingModel property. This provider will be run using the LocalSystem

Re: SBS Restarting!! DS Promotion? and Other such problems

account. This account is privileged and the provider may cause a security violation if it does not correctly impersonate user requests. Ensure that provider has been reviewed for security behavior and update the HostingModel property of the provider registration to an account with the least privileges possible for the required functionality.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

"MS DTC could not correctly process a DC Promotion/Demotion event. MS DTC will continue to function and will use the existing security settings. Error Specifics: d:\nt\com\complus\dtc\dtc\adme\uname.cpp:9280, Pid: 1088 No Callstack.
CmdLine: C:\WINDOWS\system32\msdtc.exe

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Sry for all the wordy bit.

The one that I have the biggest problem understanding is the DC problem. I have done nothing with teh server for months and apart from the odd restart both planned and unplanned these is not reason that I can see for this.

I'm wondering if i have a Hacker! what is the best way to check?

"Successful Network Logon:

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Should I be worried about this I have heard, i think, that if you have an

Re: SBS Restarting!! DS Promotion? and Other such problems

error 540 that this can be a problem.

I hope that someone can helpme because im getting a little twitch here. :)

Thanks
