Hi Tammy

I have had to Bypass Proxy for certain Internet web sites as well (especially when working with FrontPage webs) and like doing it with GP. Since some IE settings are being controlled by GP the IP addresses that you enter in the browser on the workstation will stay there until you log off and when logging back on GP from the server removes the addresses because they are not listed in the GPO. You can also tie a new GPO to just the workstations that you want instead of all workstations. There are all sorts of things that you can do with GPO's so if it is something that your not familiar with it is worth looking at. If you decide to try this method and need some coaching we're glad to help if we can.

Thanks
Jeff

Hello all,

I have noticed something quite strange happening in Internet Explorer when adding exceptions to the proxy settings – I suspect it has to do with the ISA Firewall client and hopefully it is a quick fix.

We are running SBS 2003 SP1 (ISA 2004) and the clients are running Windows XP Pro SP2 and we install the ISA Firewall Client on the workstations.

I have a need to enter some IP addresses in the Proxy settings exception list in Internet Explorer 6.0 on some workstations – i.e., 172.16.10.*. I will go out and back in to IE and the setting is still there however when I log off the network and back on, go into IE, that setting is gone so I'm wondering if there is something I need to do on the server to set this up.

What we're doing is running a Cisco VPN client program on a few

Re: Internet Explorer – Proxy exceptions entered disappear??

workstations

(behind ISA). The users connect to the external company's server and then they simply go into IE and access their two web sites (internal IPs). For them to access the web sites they have to temporarily disable the proxy in IE

and I was hoping to at least eliminate this step for them and put those IPs

in the Exception list – but again those entries will go away at next login.

Look forward to any assistance provided.

Thanks so much in advance!

Tammy
