Jacky,

That did the trick! Thanks for your help.

Tom

Hi Tom,

I understand that your issue is that the 'Send As' permission granted for user A to 'send as' user B keeps disappearing. If I am off base, please don't hesitate to let me know.

Let us refer to the following steps to troubleshoot the issue:

1. you need to move the user account from the following group since the permission of the user account that is a member of one of administrative groups will be reset to match the ACL of the AdminSDHolder thread.

Enterprise Admins
Schema Admins
Domain Admins
Administrators
Domain Controllers
Cert Publishers
Backup Operators
Replicator Server Operators
Account Operators
Print Operators

2. In addition, install SBS 2003 SP1

Note: This issue could be caused by the groups listed above since these groups are one of the protected groups in Windows 2003 server. An Active Directory domain controller that holds the primary domain controller (PDC) operations master role (also known as the flexible single master operations

RE: "Send As" permission resetting on SBS

role or the FSMO role) runs a thread every hour to check the access control lists (ACLs) on the above groups and all of the member objects of these groups.

If a user account is a member of one of these administrative groups because of its membership with a distribution group, the user account's ACL is checked when the thread is run and may be reset to match the ACL of the AdminSDHolder thread.

For more information:

"You do not have sufficient permissions in the Domain" error message occurs and Exchange Setup does not respond
<http://support.microsoft.com/?id=319966>

AdminSDHolder Thread Affects Transitive Members of Distribution Groups

I appreciate your time. I am happy to be of assistance and look forward to your reply.

Best regards,

Jacky Luo (MSFT)
