I knew someone would ask me that.

1. I have a hardware firewall between my ISP and my ADSL Modem.
2. I'm having problems doing remote client updates of AV (FSAV 2007) software and once the techies at the AV support hear about my ISA firewall they ask me to disable it to see if the update works.
3. I'm not so hot when it comes to managing the ISA settings.

Can you answer the original question, please.

TIA
Mark

Why do you want to uninstall it?

Hi,

How do I do a clean uninstall of ISA Server 2004 ?

Will Control Panel, Add & Remove progs do the trick ?

or

Is there some cool SBS Wizard that does it ?

Will my clients be able to connect to the Net when the ISA Server has been uninstalled.

TIA

Mark.
