Seems the gurus gave this sp2 a go ahead for the sbs2003 so I went ahead and updated my fully patched SBS2003 standard SP1 with the sp2.

The installation went smoothly. But the problems came after the restart. When logging on locally at the console, the server responded with "The system cannot start as currently configured. Using a previous configuration instead". But I logged on and everything seems fine.

Next check the event logs, nothing much in the system log. However, in the app logs, I see a lot of winmgmt and perflib warnings as below. What should I do?

Event ID 5603:

A provider, Rsop Planning Mode Provider, has been registered in the WMI namespace, root\RSOP, but did not specify the HostingModel property. This provider will be run using the LocalSystem account. This account is privileged and the provider may cause a security violation if it does not correctly impersonate user requests. Ensure that provider has been reviewed for security behavior and update the HostingModel property of the provider registration to an account with the least privileges possible for the required functionality.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

A provider, PerfProv, has been registered in the WMI namespace, ROOT\CIMV2\MicrosoftHealthMonitor\PerfMon, but did not specify the HostingModel property. This provider will be run using the LocalSystem account. This account is privileged and the provider may cause a security violation if it does not correctly impersonate user requests. Ensure that provider has been reviewed for security behavior and update the HostingModel property of the provider registration to an account with the least privileges possible for the required functionality.

Perflib/Event ID 2003

The configuration information of the performance library "C:\WINDOWS\system32\asperf.dll" for the "ASP" service does not match the trusted performance library information stored in the registry. The functions in this library will not be treated as trusted.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Perflib/Event ID 1016

The data buffer created for the "EXOLEDB" service in the "C:\Program Files\Exchsrvr\bin\exodbpc.dll" library is not aligned on an 8-byte boundary. This may cause problems for applications that are trying to read the performance data buffer. Contact the manufacturer of this library or service to have this problem corrected or to get a newer version of this library.

## Perflib errors in event logs after SP2 installation

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

The data buffer created for the "IAS" service in the "C:\WINDOWS\System32\iasperf.dll" library is not aligned on an 8-byte boundary. This may cause problems for applications that are trying to read the performance data buffer. Contact the manufacturer of this library or service to have this problem corrected or to get a newer version of this library.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

WinMgmt/Event ID 47

WMI ADAP was unable to retrieve data from the PerfLib subkey:

SYSTEM\CurrentControlSet\Services\Autocat\Performance\Library, error code: 0x80041009

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

WMI ADAP was unable to retrieve data from the PerfLib subkey:

SYSTEM\CurrentControlSet\Services\MSSEARCH\Performance\Library, error code: 0x80041009

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

WMI ADAP was unable to retrieve data from the PerfLib subkey:

SYSTEM\CurrentControlSet\Services\MSSGatherer\Performance\Library, error code: 0x80041009

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.
