O O now we're learning about SG's undies. This could get dangerous!

yes, if you use a 'laundering' service it really doesn't matter who's doing the laundry, as long as your shirts come back clean and pressed.

I find the problem with 3rd party laundering to be that they lose my socks, put starch in m' undies, and don't listen to what I suggest is proper handling.

3rd party email handling is similar.

LOL... postfix, same as sendmail... that explains it..

Been a while since used that, Ive moved on... ;-)

Who is your 'small' ISP

Alexander's tip work fine

Thanks

Hi Simon, by default at setup, MX record is at ISP / Domain host.

Re: Can I configure Exchange to ONLY accept email from my ISP ??

All the work is done by the ISP then, you just tell them when they scanned it send it onto your IP... dont think you will get any assistance though, they will say collect it by pop3.

Why you concerned about opening your IP for SMTP... no hacker can get in that door, port 25 wil only accept email requests. Just have to ensure you are not an open relay

Email communications are standard industry, you cant have your own system..Ports 25 and 110 (ssl are on different) Unless ISP has facility to utilise other ports, cant see where this will work.

Im trying to understand your logic, is there something you have done in the past for this to work ?

POP3 – no

MX record for our domain
will be set to ISP's server

This also mean our IP is not
exposed via MX

ISP will scan the email
"Clean" mail will be sent to
our IP

Hi Simon,

Mail
delivered to

Re: Can I configure Exchange to ONLY accept email from my ISP ??

Re: Can I configure Exchange to ONLY accept email from my ISP ??

your ISP,
you collect
via pop3,
SBS pop3
not
recommended,
3rd party
better.

Have I
missed
something...;-)
can you
elaborate a
bit more...
;-)

Technically,
if ISP
supports it
can
configure
MX and A
records to
send email
to ISP via
SMTP this
then hops
over to your
server but is
additional
configuration
for
something
unnecessary.
If trying to
utilise ISP
spam / virus
capabilities
then this
would
usually be
available
for pop3.

As I say,
elaborate a
bit more
what you
mean...

If

so

how?
