There is a memory.dmp file on that computer

Do this:

This server reboots on an ongoing basis, here is the latest event log for the failure

The reason supplied by user ASYSTINC\Administrator for the last unexpected shutdown of this computer is: System Failure: Stop error

Reason Code: 0x805000f

Bug ID: Bugcheck String: 0x00000050 (0x99d699d6, 0x00000000, 0x8089bf87, 0x00000000)

Comment: 0x00000050 (0x99d699d6, 0x00000000, 0x8089bf87, 0x00000000)

Tried to google information about this and did not seem to get anywhere. I found a microsoft tool called ADPlus supposed to help troubleshoot hangs and crashes. could use some help with it and how to use it. Any help on troubleshooting this problem is appreciated thanks
