I have tried some more things to get this Remote Access Wizard to complete successfully but no go, can anyone tell me what the final error relates to?

```
*** Starting RRAS service returned ERROR 80070420
Specifying error location returned OK
*** CRRASCommit::CommitRRAS returned ERROR 80070420
*** CRRASCommit::CommitEx returned ERROR 80070420
```

Hi technetians, long time lurker first time poster.

I have had issues since running SP2 on my SBS 2003 Server (OEM), after trying several fixes as found here I decided a fresh install would be better for me. I only have 6 users and it was just easier for me to finally setup the RAID mirror I wanted initially.

Now comes to my problem, RRAS wont finish correctly, log as follows:

```
16/04/2007 3:16 PM
C:\Program Files\Microsoft Windows Small Business
Server\Networking\RRASWiz\wizrras.dll, version 5.2.2651.0
Calling CRRASCommit::CommitEx
Calling CRRASCommit::ValidatePropertyBag
pdispPPPPBag->QueryInterface returned OK
PropertyBag 267490
Reading property value for enabling Remote Access returned OK
bRemoteAccess = 1
Reading property value for VPN returned OK
bVPN = 1
Reading property value for RAS returned OK
bRAS = 0
Calling CRRASCommit::ValidateVPNProperties
Reading VPN Server Name returned OK
VPN Server Name is rgmednsw.redirectme.net
Calling CRRASCommit::ValidateDHCPProperties
DHCP server is installed on the box
```

RE: RRAS Wizard failure

CRRASCommit::ValidateDHCPProperties returned OK
CRRASCommit::ValidateVPNProperties returned OK
CRRASCommit::ValidatePropertyBag returned OK
pdispPPPBag->QueryInterface returned OK
Pointer to the property bag 267490
Calling CRRASCommit::CommitRRAS
Arguments:
PropertyBag 267490
bRAS 0
bVPN 1
Getting the GUID of the private NIC returned OK
Private NIC Guid is {953AA7D9-C558-4018-853F-EC767BFDCCF3}
Checking whether RRAS is already running returned OK
RRAS already running
Stopping RRAS returned OK
Installing RRAS returned OK
Dhcp server is installed and running on this box
Enabling DHCP client addressing returned OK
Configuring ports returned OK
Identifying the private NIC for RAS returned OK
Setting the default authentication methods returned OK
Disabling NETBIOS for RAS returned OK
Changing RRAS startup type to automatic returned OK
Configuring Remote Access Policy returned OK
*** Starting RRAS service returned ERROR 80070420
Specifying error location returned OK
*** CRRASCommit::CommitRRAS returned ERROR 80070420
*** CRRASCommit::CommitEx returned ERROR 80070420

I have run all available updates and service packs, any and all help would be appreciated.

By the way my initial SP2 problem was with companyweb disappearing, like many others.

Kind regards,
Peter Clarke.
