Hi Terence, hi SBS2K3 Admin.

Thank you for your answer. Actually Terence is on the right track, that's what I'm trying to get. However I thought about making the document library some kind of virtual folder which would be redirected to folder on another disk. Or in other words, is it possible to set where the document library folder will be?

Thanks, Jan

I'm not sure that is what she is looking for. She wants to be able to use a "shared" network location. She does not want to copy or upload the documents. Unfortunately your suggestion will only copy the documents there and not synchronize and make changes at the original location. She wants her users to be able to access \\servername\sharename from the companyweb and the only way I can think of is to insert a hyperlink on the page for \\servername\sharename.

Hello Jan,

Thank you for kind update.

Yes, we can make the documents accessible from Internet. However, we have to upload the documents to the document library in companyweb first. We can not just give out a link to the share folder to make it accessible from Internet.

Upload the documents to the document library in companyweb:

1. Please open companyweb, click Documents and Lists in the top.
2. Click one document library name in the Document Libraries list
3. Click Upload Document, browse to the files you want, and upload it.

Re: Publishing folders on companyweb

Then you can access the uploaded documents from Internet.

Note: For more info about document library in companyweb you can post your

question in WSS newsgroup:

http://www.microsoft.com/technet/community/newsgroups/dgbrowser/en-us/default.aspx?dg=microsoft.public.sharepoint.design_and_customization

Hope these steps will give you some help.

Thanks and have a nice day!

Best regards,

Terence Liu(MSFT)

=====

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the

"Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
