Please disregard above. I posted this in the wrong topic. The issue I'm having with SP1 is still an issue and I have not had the opportunity to take the steps suggested. I will post back with the right information as soon as I can.

Thanks Jacky,

Last night via a slow wireless link at the hotel I was eventually able to execute the necessary steps to completely remove SPS. Then I followed the steps to prepare for an install. Once the install was complete it did indeed display an error message but..... the error message I got was NOT one of those listed in the instructions.

Undaunted I plodded on and applied the suggested KB which was referenced by the instructions. This KB was to install a patch because of the 'original disk' installation.

I didn't really expect success because the error message I got was different than the one mentioned but once it was all finished I attempted to access the companyweb site and..

SUCCESS.

It is indeed a happy day in Whoville.

Thanks for the help.

Hi Bob,

Thanks for posting back.

RE: New Problem SP1 can't find file specified

you may feel free to post back when you have any update and we will be here for you.
have a great day!

Have a nice day!

Best regards,
