Hi

sbs 2003 with ISA 2004. A client pc A has stopped being able to see shared drive and printer from another pc B on the network. The rest of the pcs and server can still see the shared drive and printers on pc B. At the same time pc A can see shared drives/printers from the rest of the pcs and server. This means problem is only between two client PCs. This makes it really confusing. What is the problem and how can I fix it?

Thanks

Regards

.
