Need to give your post's some time to show up before posting again

How did you "move" your server?

I've moved my SBS 2003 install to my new hardware, now everytime I try to run a wizard I get an application error event 1000. Although everything seems to be working properly. My big problem in that I need to transfer my licenses from my old server to my new server, but cannot because the transfer wizard (transfer.exe) throws the application error. I've tested my exchange and my remote access and all is working. I just can't get more than 5 users logged in until I get me license transferred. I really don't want to erase and start again. Even ICW throws the application error.

Here are the steps to take to move to the new hardware:

- 1) installed from cd
- 2) setup static ip on LAN card
- 3) DCPROMO on new server
- 4) Made new Server GC
- 5) Remove GC from old server

Re: Migrate SBS 2003 to new hardware problem

- 6) Transfer the FSMO roles to new server
- 7) Move Site Licenses Server to new server
- 8) Continued integrated setup of SBS
- 9) moved exchange data
