Hello Customer,

Thank you for posting here.

According to your description, I understand that you get error "Failed to create configuration database" when you install WSS 3.0 on SBS 2003 thru the whitepaper. If I have misunderstood the problem, please don't hesitate to let me know.

Based on my research, I suggest we try the following steps to see if we can resolve this issue:

If we can not resolve the issue after we perform the above steps, please kindly help me collect some information for further investigation:

Hope these steps will give you some help.

Thanks and have a nice day!

1. Close the error dialog.
2. Install the Sharepoint 3.0 hotfix package from KB 934790.

Note: This hotfix package is currently not available for public download. Please contact Microsoft Customer Support Services to obtain the hotfix. For a complete list of Microsoft Customer Support Services telephone numbers and information about support costs, visit the following Microsoft Web site:

<http://support.microsoft.com/contactus/?ws=support>

934790 Description of the Windows SharePoint Services 3.0 hotfix package:

April 12, 2007

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:934790>

3. After you apply this hotfix, please run the "SharePoint Products and Technologies Configuration Wizard."

RE: SBS 2003 Premium Sharepoint Services 3.0 update with SQL 2005

To do this, click Start, point to All Programs, point to Administrative Tools, and then click SharePoint Products and Technologies Configuration Wizard.

NOTE: This is the same wizard that you run in Step 3 of the WSS 3.0 whitepaper. You only need to run this wizard once to completion after installing the hotfix.

4. Complete steps 4–6 in the WSS 3.0 white paper to complete the Sharepoint 3.0 side by side installation on SBS 2003.

Additional info for your reference:

Installing Windows SharePoint Services 3.0 on a Server Running Windows Small Business Server 2003

Hope these steps will give you some help.

Thanks and have a nice day!

Best regards,

Terence Liu(MSFT)

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner.

You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

|
| I am trying to install Sharepoint 3.0 side by side with 2.0 as discussed
in
| the whitepaper noted in other posts. I have upgraded to SQL 2005
(evaluation
| edition) and have also installed WSUS 3.0. I have also completely
rebuilt
| the server from formatting the disks to installing all relevant updates
that
| I could find to ensure a 'supportable' configuration.
|
| Sharepoint 3.0 is installed as side by side with the 'standalone server'
| option chosen.
|
| During the 'Sharepoint Products and Technologies Configuration Wizard' I
| receive the following error message:
|
| "Failed to create configuration database.
|
| An exception of type System.Data.SqlClient.SqlException was thrown.
| Additional exception information: Could not find stored procedure
| 'dbo.proc_getObjectsByClass'."
