If you go to Routing and Remote Access, go under IP Routing and then NAT/Basic Firewall, then right click on the NIC connected to the internet and you'll see a tab at the top that says service ports. Add the port you want to open under there. Best of luck :-)

Hi Jesmin

Where is the firewall interface, under routing and remote access?

Thanks

Regards

Based on the Firewall type, I would go to the Firewall Interface >  
– Configuration > Ports > Specify the Port type and number > Point it to  
the Ip of the Server.  
– Should be pretty simple !!

Hi

sbs 2003 standard. How and where can I open the port 8055  
on the  
standard  
firewall?

Re: Opening port on standard firewall

Thanks

Regards
