Thanks KJ,

The darn thing doesn't support USB CD. I have a floppy that allows write and I get in but I need something that will undelete those darn files in the C root.

Google shows quite a few but I don't have experience with any of them. Sorry. How the heck did that laptop get built with XP without a CD/DVD (PXE perhaps)?

Henry,

I just had a look at it and it's not what I'm searching for. I was after a program that would boot off a floppy, make the C drive accessible and the recover deleted files. With GetDataBack (if I understand it right) I would mount the laptop drive remotely.

Claus,

You'd probably be better off getting a USB CD drive if your laptop supports booting it. If your XP was installed using NTFS (as it should be) then you are going to have a problem reading let alone writing to the hard drive (without BartPe / WinPE). NTFS-DOS will let you read the filesystem, but not write to it. I don't know if NTFS-DOS Pro is still around or not.

Re: Boot Floppy

You need a Bart's PE Disk
and a copy of GetDataBack.

Does anybody know of a
good file recovery tool that
can boot from
a floppy? Laptop doesn't
have a CDROM and the
user seemed to have
deleted all files in the C root
on his XP Pro.

Thanks
