Hello Bob,

Thank you for posting here.

From the post, I understand you do not install SQL 2005 Workgroup on SBS

2003 R2 before he installed WSS 3.0 on it and WSS 3.0 using SSEE (SQL Server 2005 Embedded edition) as database. Now, you want to migrate the database from SSEE to SQL 2005 Workgroup.

If this is your concern, please repost your issue in WSS newsgroup for further assistance.

This newsgroup is primarily for issues involving deployment, configuration, consultation and troubleshooting. The reason why we recommend posting appropriately is you will get the most qualified pool of respondents, and other partners who read the newsgroups regularly can either share their knowledge or learn from your interaction with us.

WSS Newsgroup:

Additional, I can only provide some general documents for your reference:

Installing SQL Server 2005 WorkGroup Edition in Windows Small Business Server 2003 R2

<http://download.microsoft.com/download/4/0/8/40860507-c351-4308-a876-e1b83ee4e77a/sqlinstallsteps.htm>

Installing Windows SharePoint Services 3.0 on a Server Running Windows Small Business Server 2003

<http://www.microsoft.com/downloads/details.aspx?FamilyID=0daafc81-fff-4f5b-a28a-8265f1e99f5b&displaylang=en>

I hope the information above is helpful.

RE: Upgrade to Premium After Installing WSS 3.0

Thanks for your understanding.

Have a nice day!

Best regards,

Terence Liu(MSFT)

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| My SBS 2003 R2 currently has WSS 2.0 running side-by-side with WSS 3.0
| (as per installation instructions specific to SBS 2003). I am ready
| to install SQL 2005 Workgroup Edition from R2 Premium Technologies
| Upgrade. The instructions provide for migrating the SPv2 WMSDE to
| 2005 Workgroup but I have been unable to find guidance on switching
| SPv3 from it's default Microsoft##SSEE to 2005 Workgroup. Other
| installation facts:

| (1) SPv2 is NOT in use (thus it's database contains only the
| installation default data) but must remain up and running due to its
| tight integration with SBS wizards, components, etc.

| (2) SPv3 contains only test data and could be re-installed if
| necessary.

| (3) Everything seems to be running correctly (except for a single .NET
| 2.0 error that happens daily at 2:45 AM, but that's another story).

| I wonder if upgrading from the current configuration to SQL 2005
| Workgroup would have any benefits (e.g. less memory utilization, some
| features in WG that are n/a in SSEE, etc.).

| >From the 04/26/2007 post "Allocated Memory Alerts!" I see that I could
| uninstall WSS 3.0 (and remove the SSEE) then install SQL 2005
| Workgroup (and migrate 2.0 from WMSDE to WG 2005) then re-install WSS
| 3.0 but this time select the "Server Farm" option. I'm guessing this
| would result in 2 instances of WG 2005: one for SPv2 and one for
| SPv3. Certainly a "cleaner" configuration than before but I wonder if
| I'm just asking for trouble here.

| Any guidance/suggestions will be greatly appreciated.
