The whole purpose of the logon script is to perform the actions you mention

Logon script, however, does not run if you logon and then create VPN
You can however logon, and then have a shortcut on the users desktop which they could run as needed. But the server is not going to initiate this

Dear cris

Thx for the response.

The client pc's are making the vpn connection.
After the vpn is established i will be able to run a script (not the login script) from the sbs server to f.i map some drives.

I want to initiate this from the server and not make a tool or a persistent drivemapping on the client.

suprise me.

Do you have a persistent site to site VPN or is the PC making the connection

Im sorry, but im am using sbs2003 r2 and winxp clients.
Maybe thats also a nice thing to know.

I've got everthing in order. VPN connections
works just fine. I only
want
to
run a script only when vpn users conecting. I
don't want that this
script
runs when ordinary lan users connecting.

Can someone give me some ideas.

thx in advance.
pieter
