-

Since installing SP2 on my SBS 2003 R2 system in my office I've been getting a TON of the following error:

=====

Application Event Log
Source: Userenv
Type: Error
Event ID: 1091
User: NT Authority\System

The Group Policy client-side extension Security failed to log RSOP (Resultant Set of Policy) data. Please look for any errors reported earlier by that extension.

=====

There are no complementary events in the System or other areas.

I did notice this one always paired with the above error:

=====

Application Event Log
Source: SceCli
Type: Information
Event ID: 1704
User: NA

Security policy in the Group policy objects has been applied successfully.

=====

Anyone seen this – I've got reports from another person that they started seeing this after uninstalling SP2, but I didn't uninstall it and all updates are applied. Google/MS doesn't seem to have a resolution for it that I can find.

Thanks

Getting tired of Error 1091
