I'm having a bizarre problem with an account that gets locked out multiple times per day.

My account was previously a member of the domain admins group for a long time. Bad, I know. So, recently I pulled the account from domain admins and made it a member of domain users.

However, it seems like if I'm not a member of domain admins, my account gets locked out every hour or two. From the SBS 2003 security logs:

Event Type: Failure Audit  
Event Source: Security  
Event Category: Logon/Logoff  
Event ID: 539  
Date: 7/18/2007  
Time: 3:50:42 PM  
User: NT AUTHORITY\SYSTEM  
Computer: BIGSERVER01  
Description:  
Logon Failure:  
Reason: Account locked out  
User Name: jobrien  
Domain: SERVER01  
Logon Type: 3  
Logon Process: NtLmSsp  
Authentication Package: NTLM  
Workstation Name: 606  
Caller User Name: -  
Caller Domain: -  
Caller Logon ID: -  
Caller Process ID: -  
Transited Services: -  
Source Network Address: 192.168.1.138  
Source Port: 2193

Prior to this entry are multiple success audits from my account and others, which seems normal.

## account locked out multiple times per day

I have checked my machine and others for scheduled processes that might be running with my username, etc., but I don't see anything unusual. The security policy is set to lock out accounts after 50 invalid login attempts. I assume that those invalid attempts should show up in the security log, which they do not.

Can anyone give me advice on how to troubleshoot this?

Thanks.  
Joseph
