Hello Customer,

There is a update for you.

If the remote users want to logon SBS desktop thru RWW, the user must be the member of Domain Admins. Please check the settings thru the following steps:

Please open Server Management console on SBS, locate on Users node, double click the remote user account, select Member Of tab, ensure Domain Admins group in the list. Click OK.

If there's anything else I can do for you, please do not hesitate to let me know.

Thank you and have a nice day,

Best regards,

Terence Liu(MSFT)

Microsoft CSS Online Newsgroup Support

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

RE: Terminal Services

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| Hello Customer,

| Thank you for posting here.

| According to your description, I understand that you want to have staff log onto their workplace computers remotely. If I have misunderstood the problem, please don't hesitate to let me know.

| Based on my research, we cannot make SBS to work as terminal server. That's why you cannot find Terminal Services in Add/Remove Windows Components. This is by-design. Meanwhile, you only want the staff log onto their workplace computers remotely, we have Remote Web Workplace (RWW) in SBS to properly achieve this goal.

| The RWW is a SBS built-in web site, you can access the web site from external. After you input your domain user name and password in the RWW page and logon the web site, you can get the link to logon internal client

RE: Terminal Services

| computers' desktop. Please go through the following page for more details:

| Help Your Team Work From Home
| With Remote Web Workplace (RWW), now available as part of Small Business
| Server 2003, team members can do a day's work – without leaving their
| house!

| <http://www.microsoft.com/australia/smallbusiness/issues/running/productivity/home.aspx>

| To enable RWW on SBS is very easy, you can run the CEICW as the following
| steps:

| Go through the follow KB and Rerun CEICW carefully.

| How to configure Internet access in Windows Small Business Server 2003
| <http://support.microsoft.com/kb/825763/en-us>

| Detailed steps for your reference:

- | a. On the SBS 2003 Server open the Server Management console. Go to
| Standard Management\To Do List.
- | b. Click the "Connect to the Internet" link.
- | c. When navigating to the Firewall page, select "Enable firewall" and
| click
| Next (I suppose you have 2 network adapters in SBS 2003).
- | d. On the "Services Configuration" page, select all the items and then
| click Next.
- | e. On the "Web Services Configuration" page, make sure "Allow access to
| the
| entire Web site from the Internet" is selected. If you select "Allow
| access
| to only the following Web site services from the Internet", make sure all
| item in the list are selected. Click Next.
- | f. On the "Web Server Certificate" page, choose to create a new Web
| server
| certificate and then type the public domain name (your public DNS name)
| that you will use to access OWA and RWW (for example, if your public
| domain
| name that you use to access the sites is www.xyz.com, you should type
| www.xyz.com as the new certificate name).
- | g. Go through the remaining steps.

| Then, you can access the RWW from external thru
| <https://www.zyz.com/remote/>.

RE: Terminal Services

| I hope these steps will give you some help.

| Thanks and have a nice day!

| Best regards,

| Terence Liu(MSFT)

|| I'd like to have staff log onto their workplace computers remotely.
The
|| first person to try it got the message that he had to be granted
| permission
|| to log on through terminal services. This person is a member of the
| Remote
|| Desktop Users. Now I got a message that our domain does not contain
any
|| terminal servers. I went to Control panel to Add/Remove Windows
| Components
|| but did not see Terminal Services. What I found there was Terminal
| Services
|| Licence Server that I installed. How can I straighten this up to
enable
| my
|| staff to be able to logon remotely?
||
|| Thank you in advance.
||
