Hi,

I have a number of shares set up on my SBS 2003 Server and I have set the permissions as Everyone with Full Control.

I have an XP Pro box logged into the domain and try to save a file to the shared folder and get:

```
"Unable to create the file "xyz.txt"  
"There is not enough space on the disk"
```

Well the disk has 159GB free out of 200GB available??  
What is going on?

I looked at the permissions and they all say that I should have permission to write files to the folder.  
At the top level shared folder I looked at the permissions in the share which has:

Administrators – Full Control  
Everyone – Full control

The Security tab shows:

Administrators – Full control  
CREATOR OWNER – Special Permissions – inherited  
Domain Users – Full Control – Inherited  
Everyone – Full Control  
System – Full Control – Inherited  
Users – Full control – Inherited.

Can anyone explain why I am getting this error, it's driving me mad?

Siv
