Larry,
You sir are diamond!
That was exactly what was causing the problem!
Thanks very much for your help.

Siv

Hi Siv:

Quotas on the partition/volume where the user shared folders are. By default it is 1 Gb per user, over the entire drive, not counting exchange, sql or sharepoint.

1. Log on to your system with an administrator account, for example, owner or administrator.
2. Click Start, and then click My Computer.
3. Right-click on the drive, and then click Properties.
4. Click the Quota tab.
5. Either increase the amount of disk space available to users by changing the Limit disk space to option or disable the Disk Quotas feature by clicking to clear the Enable Quota management check box.

Hi,
I have a number of shares set up on my SBS 2003 Server and I have set the permissions as Everyone with Full Control.
I have an XP Pro box logged into the domain and try to save a file to the shared folder and get:

Re: Keep getting "Not Enough Space On The Disk" when trying to save files to a server share?

"Unable to create the file "xyz.txt""

"There is not enough space on the disk"

Well the disk has 159GB free out of 200GB available??

What is going on?

I looked at the permissions and they all say that I should have permission to write files to the folder.

At the top level shared folder I looked at the permissions in the share which has:

Administrators – Full Control

Everyone – Full control

The Security tab shows:

Administrators – Full control

CREATOR OWNER – Special Permissions – inherited

Domain Users – Full Control – Inherited

Everyone – Full Control

System – Full Control – Inherited

Users – Full control – Inherited.

Can anyone explain why I am getting this error, it's driving me mad?

Siv
