Hello,

Do you by chance have gateways set for both network cards?  
Only one should have a gateway setting.

Can you please run "route print" from the command prompt and paste the results back here ?

Thanks

skippy wrote:

Hello,

We have two router in our network...first from our ISP dan the second is router to route to branch site (Private Network via WIFI).

If I setting the two NIC with different IP (IP fix from isp and the other IP local ,and sure with different gateway) there is error happen. Error in local network (ex:my server in HQ cannot replicate to branch server) OR error in internet connection (cannot send email to external email or browsing).

And popup windows show the warning:

"Warning-Multiple default gateways are intended to provide redundancy to a single network (such as an intranet or the internet)...bla..bla"

Please help me ..somebody. Thankyou for your appreciate.
