Hello Teneo,

Thank you for your reply.

I understand that the recent issue is Outlook cannot connect to Exchange. After disabling RPC filter, the issue disappeared.

I think SP2 should not be the cause of this issue. It can be caused by something else.

However, we need to look inside to determine the root cause.

If you could send me following files, I will appreciate it:

A. Please download the MPS Report tool from the following link and run it on the SBS server, then send the generated CAB file to my mailbox v-mzhuang@xxxxxxxxxxxxxxxxxxxxxx for further investigation so that we can find what the root cause is:

http://download.microsoft.com/download/b/b/1/bb139fcb-4aac-4fe5-a579-30b0bd915706/MPSRPT_SETUPPerf.EX

For your information:

<http://www.microsoft.com/downloads/details.aspx?FamilyId=CEBF3C7C-7CA5-408F-88B7-F9C79B7306C0&displaylang=en>

B. ISA log:

1. Open ISA 2004 management console.
2. Expand the server node and highlight "Monitoring".
3. In the right pane, switch to the "Logging" tab; make sure the "Task Pane" is showed there.
4. In the "Task Pane", click "Configure Firewall Logging" under "Logging Tasks", and then switch the "log storage format" from "MSDE Database" (default) to "File".
5. Switch to the "Fields" tab, and then click "Select All".
6. Click OK, and then click "Apply" to save changes and update the configuration.

Re: SP2.. brand new install

7. Repeat step 4 to step 6 on Web proxy Logging,
8. Repro the issue and compress and email to v-mzhuang@xxxxxxxxxxxxxxx with "C:\Program Files\Microsoft ISA Server\ISALogs" folder.

Please try the above steps at your earliest convenience. If you have any concern, please feel free to let me know.

Best regards,

Manfred Zhuang(MSFT)
Microsoft Online Newsgroup Support

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner.

You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| Hello Manfred, thank you for your contribution..

| I have all the links for SP2 issues on SBS... we have a 20 point checklist

| when installing SP2... we still haven't finished installing it on all servers and this NEW server install issues have not given us much confidence. Issues are on the SBS Premium servers and its not consistent, some install fine some have certain errors and others have other errors.

| Comments made, trying to justify SP2 issues from other posters mention it could be original configuration and maybe an error was already sitting on the server and this SP2 just highlights it, of course they are just reiterating comments from Msoft KBs... Sorry but thats ' baloney ' this is a

| complete new install and nothing was configured, after install we installed

| SP2 immediately and then all windows updates.

| After uninstalling SP2 numerous times (applying all mentioned 'fixes') the

| recent issue was outlook not connecting to Exchange. Yes I did the EnableRSS=0 but then this KB is out of date as the registry key EnableRSS the registry entry was already in the registry, how this appeared, previous

| install of SP2 or ISA SP3, I dont know... TThe KB mentioning about the EnableRSS=0 refers to ISA SP2, SP3 is out now so reading the KB do we install SP2 do the registry fix then install SP3.... sorry dont have time to

| do all the fixing, testing.

| Any how, reading the blogs I found a poster referred to disable RPC in ISA

| addins and bingo Outlook now working... now I have to investigate the implications of this on a working clients server !
