Hello,

I've decide to not installed ISA yet. And now I have question, How do I disable Internet sharing to user, without ISA? Some user my have internet connection, but the other have no right to use internet access from their computer. What I must to do now?

Thankyou for your help before.

If you are using one NIC, then configure the router to block access from particular machines. You will need to make them reservations in DHCP so their IP addresses don't change.

If you have two NICs, install ISA. That's one of the purposes of ISA, why do you assume that there is a second program which will do the same job?

.
