Hello Corey,

Thank you for taking time to reply.

I would like to explain that to make WSUS work, SelfUpdate virtual directory must be in a web site that listens to port 80. In SBS R2, selfupdate virtual directory is installed in WSS 2.0 Default web site by default. It means default web site must be started if we want WSUS to work.

In addition, since many SBS services depend on SharePoint 2.0, we don't recommend stopping SharePoint 2.0 default web site.

I would like to confirm how did you install WSS 3.0 on the SBS server?

Please understand that we need to install WSS 3.0 side-by-side with Windows SharePoint Services 2.0

To resolve the problem thoroughly, I think we'd better reinstall WSS 3.0 first.

Please remove WSS 3.0 and then refer to following article to reinstall it:

Installing Windows SharePoint Services 3.0 on a Server Running Windows Small Business Server 2003  
<http://www.microsoft.com/downloads/details.aspx?FamilyID=0daafc81-efff-4f5b-a28a-8265f1e99f5b&displaylang=en>

I am sorry for the inconvenience that you may experience.

If you have any concern, please feel free to let me know.

Best regards,

Manfred Zhuang(MSFT)

Re: WSUS Client not yet reported

=====  
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

Re: WSUS Client not yet reported

Re: WSUS Client not yet reported

| X-Tomcat-NG: microsoft.public.windows.server.sbs

| Thanks for the suggestions. Here are my responses:

| Suggestion 1:

| It was already set to Granted access.

| Suggestion 2:

| Those were the ports already, and the path was correct. I verified the security settings as well.

| Suggestion 3:

| I did as you indicated. The client still fails to report. However, the code

| in the WindowsUpdate.log file is now 0x800710dd. What does this code mean?

| I will hold off on the logging, as I don't want to continue to download and

| install a bunch of exploratory applications. I will point out again that the

| Default Web Site is already stopped, since it listens on the same port as SharePoint. However, I did try stopping SharePoint and having the Default Web Site running, and still got the same issue.

| Thanks.

| Corey
