Did you google on pssvc (Outlook related) and vpc32 (Symantec related)? I sure hope you're not running Outlook on your SBS box.. What are the processor and memory specs of your SBS?

Hi,
Sorry about the incomplete post above.
Recently I have found that my server is running very slowly and the CPU and memory usage is high.
Process Name – ID
pssvc – 2676 39.6%
vpc32 – 4368 20.5%

Processes by memory
procmon – 4992 818 MB
store – 1256 357 MB
store – 1448 333 MB

I have downloaded the ff processor monitoring tool <http://www.microsoft.com/technet/sysinternals/ProcessesAndThreads/processmonitor.msp> to assist in tracking down the offending process. The problem is that I am not familiar with its usage. Assistance will be appreciated.
Any other suggestions with getting the server speed up will also be appreciated.
