

Re: WSUS Client not yet reported

Source:

<http://www.tech-archive.net/Archive/Windows/microsoft.public.windows.server.sbs/2007-09/msg02597.html>

- *From:* "Corey" <czinn@xxxxxxxxxxxxxx>
 - *Date:* Tue, 18 Sep 2007 12:37:16 -0400
-

I got back to where the client computer is showing up in WSUS, but not reporting, and therefore not getting updates. The errors in the WindowsUpdate.log are 0x80190191 and 0x80244017. Is it possible that the password for the anonymous account in IIS is not correct? If I reset the password for the IUSR account through AD Users and Groups, and then change it in IIS, are there other implications? Also, would I only need to change it in IIS for the top-level web sites, and then it will propagate to the items underneath? Or do I have to go into each one?

Thanks.

Corey

"Corey" <czinn@xxxxxxxxxxxxxx> wrote in message news:13evjahqoq3fhda@xxxxxxxxxxxxxxxxxxxxxxxx

I successfully uninstalled and reinstalled the Monitoring component, and then installed R2. It seems that there were some folders that the Administrators group did not have full access to; once I corrected that, I could uninstalled/reinstall properly.

Now the client pc is no longer showing up in WSUS, so of course it's not reporting. I will email you the MPS reports (server and client) and the WindowsUpdate.log from the client.

Thanks for your continued help with this issue.

Corey

"Manfred Zhuang [MSFT]" <v-mzhuang@xxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:Hjsnu9P%23HHA.4200@xxxxxxxxxxxxxxxxxxxxxxxx

Hello Corey,

I am sorry for the delay due to the weekend.

I understand that following error message was received when trying to

Re: WSUS Client not yet reported

install SBS 2003 R2:

!Error! WorkItemExecutor: Exception occurred in DoWork() for work item RunMSP: System.Exception: Unable to open product {5546F70C-0437-44EE-A923-7C23E6EFF689}, MsiOpenProduct() returned 1605
at Setup_Util.SetupUtil.GetTargetPathOfProduct(String productCode, String target)
at R2_SetupWizard.R2WI_RunMSP.get_MSIDefaultProperty()
at R2_SetupWizard.R2WI_RunMSP.DoWork(StringDictionary sd)

{5546F70C-0437-44EE-A923-7C23E6EFF689} is the UUID for SBS monitoring component. This error can most likely be caused by two factors:

1. You tried to install R2 as a user that is not the built-in Administrator.
2. The monitoring component on SBS server was corrupted.

At this point, I suggest you try following steps:

Step 1: Log on SBS by using the built-in Administrator

=====

We can use perform following steps to verify it:

1. Start-->Run, type cmd and click OK.
2. Run following command:

```
NET USER <USERNAME> /Domain
```

(Replace <USERNAME> with the user you are currently logged in with).

The built-in Administrator will show the following as the Comment:

"Built-In account for administering the computer/domain."

If it still cannot be installed, let's try following steps:

Step 2: Re-configure monitoring component:

=====

1. Inset SBS 2003 SP1 installation CD3.
2. Run following command:

```
X:\sbs\monitor\monitoring.msi INSTDIR="C:\Program Files\Microsoft Windows Small Business Server\Monitoring" IISDIR=c:\inetpub\Monitoring /L*v c:\log.txt
```

Please replace the X with your CD drive letter.

After that, please try to install R2 again. If it fails again, I am

Re: WSUS Client not yet reported

afraid

we need to reinstall SBS monitoring component:

Step 3: Reinstall SBS monitoring component:

=====

0. Make a full backup of the SBS 2003 server.

1. Temporarily uninstall your antivirus programs and disable all other third party services.

2. Uninstall Monitoring using SBS integrated setup.

3. Remove the Microsoft SQL Data Engine (MSDE) component. To do so, follow these steps:

a. Click "Start", point to "Control Panel", and then click "Add or Remove Programs".

b. Click "Microsoft SQL Server Desktop Engine (SBSMONITORING)", and then click "Remove".

c. When you are prompted about whether you want to remove Microsoft SQL Server Desktop Engine (SBSMONITORING) from your computer, click "Yes".

d. Start Windows Explorer, and then locate and delete the following folder:

Program Files\Microsoft SQL Server\MSSQL\$SBSMONITORING

e. Use Registry Editor to delete the following registry key:

HKEY_LOCAL_MACHINE\Software\Microsoft\SmallBusinessServer\Monitoring
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Microsoft SQL Server\SBSMonitoring

4. Delete the Monitoring virtual directory from IIS.

5. Rename the C:\Inetpub\Monitoring folder

6. Reinstall Monitoring component using SBS integrated setup.

Then, let's try to install R2.

However, if the issue persists, please help me gather following information:

1. Please send me the latest MPS report.

2. Please zip the entire C:\Program Files\Microsoft Integration\Windows

Re: WSUS Client not yet reported

Small Business Server 2003\Logs folder and send it to
v-mzhuan@xxxxxxxxxxxxxx
3. Screenshots of the error messages you received.

Your time and effort spent are appreciated.

Best regards,

Manfred Zhuang(MSFT)

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner.

You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
