Bruce,

I'm just guessing here, but it's possible the MSDE instance for the monitoring database did not remove the registration from the registry and when you reinstall it it finds the key and it can't proceed. Try uninstalling it again, and then check to see if there are any references to the Monitoring database under 'Services'.

If you find any, don't do anything and just post here so I can look into some references on how to manually uninstall an MSDE instance

Bruce,

My understanding is that it refers to both kind of components. But I don't believe it matters at this point since you uninstalled WSUS 3.0. What you want to do now is put the server in Maintenance mode and then reinstall SBS

Re: Unable to reinstall SBS Monitoring

Monitoring from the Server Tools. See if you still get the error you were getting when you first posted. If you install without any problems, you can go ahead and add the R2 components and then upgrade to WSUS 3.0

—
Costas

Costas...

I started on the process outline above...steps 1 and 2 are done.....But I have to admit I still have a concern with the procedure. Here it is. Bullet point #3 in your outline above says, "3. Uninstall Windows SBS 2003 R2 components". My question is, does this refer to components such as SBS MONITORING (which is what I want to uninstall) or does it refer to the R2 technology components? Step 4 refers to the reinstatement of the "components", but on the detail steps for this, they ask to see "Installing the Windows Small Business Server 2003 R2 Technologies", for additional information:

"... For instructions about how to install the Windows SBS 2003 R2 components, see the "Installing the Windows Small Business Server 2003 R2 Technologies" section in "How to Install the Windows Small Business Server 2003 R2 Technologies" at the Microsoft Web site (<http://go.microsoft.com/fwlink/?LinkId=89370>)"

Re: Unable to reinstall SBS Monitoring

I'm very confused. I think the key here is the context in which they use "Windows SBS 2003 R2 components".

I would appreciate your comments...

Thanks,

Bruce

I attempted the reinstall of SBS MONITORING. It failed again.

Here is the last entries in the log from C:\Program Files\Microsoft Integration\Windows Small Business Server 2003\Logs\errorlog.txt and C:\Program Files\Microsoft Integration\Windows Small Business Server 2003\Logs\eventlog.txt. In both, there is something about the instance id being bogus...on the last lines Do you think that is the issue? Do you know what that may be?
Thanks...!
