Hi Robert

Am I right in thinking that after creating a DMZ and placing the PC in the DMZ, I need to create a web publishing rule in ISA 2004 to allow the PC (hosting the additional website) to be accessed via the web ?

Regards
Gary D

Hi Robert

I think the best bet is to move the website to a PC on the network and create a DMZ for that PC. (It needs to be local because it accesses a database on SQL)

Do you have a link for instructions to create the DMZ in ISA 2004 on SBS ?
Any info much appreciated.

Kind Regards
Gary D

Hi Gary,

Thanks for your reply.

If the on-line ordering website is not under the Default Website, you can consider using Host Header. This article provides step-by-step instructions for hosting multiple Web sites by using a single Internet Protocol (IP) address.

HOW TO: Use Host Header Names to Configure Multiple Web Sites in Internet

Re: Remote web Workplace conflict ????

Information Services 6.0

<http://support.microsoft.com/?id=324287>

Also, a need to contact ISP to create A record for host header which is pointing to your Public IP.

If the web site require SSL, a suggestion to use third party certificate because SBS self-signed certificate is not trusted.

Hope this helps.

If you need further assistance, please don't hesitate to let me know.

Best regards,

Robert Li(MSFT)

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner.

You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the

"Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing

so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

Re: Remote web Workplace conflict ????

◇ inputs.

◇

◇ From your description, I know that after you installed an on-line ordering

◇ website, RWW and ordering website can't work at the same time. If that's

◇ not right, please don't hesitate to let me know.

◇

◇ Please let me know the following to make the situation more clearly:

◇

◇ 1. Do you have ISA installed?

◇ 2. Where do you visit RWW, from Internet or internal? If you visit from

◇ SBS, will the same issue reoccur?

◇

◇ Based on my experience, this issue may be caused by the IIS settings.

We

◇ need to research the configure of the ordering website, such as: listing

◇ port, host head and so on. Please help me collect the following

◇ information

◇ for further research:

◇

◇ 1. MPS Report

◇

◇ 1) Dwnload MPS report tool from:

◇

<http://download.microsoft.com/download/b/b/1/bb139fcb-4aac-4fe5-a579-30b0bd9>

◇ 15706/MPSRPT_SETUPPerf.EXE

◇ 2) Run the MPSRPT_SETUPPerf.exe on the server box.

◇ 3) Wait for 10~15 minutes.

◇ 4) Open Windows explorer, navigate to

◇ %SYSTEMROOT%\MPSReports\Setup\Reports\cab\

◇ 5) Send the .cab file to me.

◇

◇ 2. IIS Metabase:

◇

◇ 1) Download the IIS Resource Kit tools from the following page:

◇

[http://www.microsoft.com/downloads/details.aspx?FamilyId=56FC92EE-A71A-4C73-](http://www.microsoft.com/downloads/details.aspx?FamilyId=56FC92EE-A71A-4C73-B628-ADE629C89499&displaylang=en)

◇ B628-ADE629C89499&displaylang=en

◇ 2) Install it, run MBExplorer (Metabase Explorer)

◇ 3) Right click the "LM" node and choose "Export to file".

◇ 4) Specify a file name, specify the password and finish the export.

◇ 5) Send the file and the password me.

◇

◇ 3. Gather IIS log:

◇

◇ 1) Open IIS snap-in.

◇ 2) Right click Default Web Site and click Properties.

◇ 3) Uncheck the "Enable Logging" box and click Apply.

Re: Remote web Workplace conflict ????

- <> 4) Go to C:\WINDOWS\system32\LogFiles\W3SVC1 folder and move all files to a backup location.
- <> 5) Check "Enable Logging" box and click OK.
- <> 6) Run IISReset command.
- <> 7) Reproduce the problem and send the log file in C:\WINDOWS\system32\LogFiles\W3SVC1 folder to me for research.
- <> Please send the information to v-robali@xxxxxxxxxxxxxx with subject: Remote web Workplace conflict ????
- <> I am looking forward to hear from you.
