I have got a problem with VPN. It does work fine on LAN but if I connect via VPN I can get access to company LAN.

I can see server and whole network. Company web, I can remotely log in any PC in company LAN.

The problem is when I go to e.g. Users Folders I get disconnected.

Sometimes before I do any first move via VPN I get disconnected as well.

I haven't done any changes on the server. The problem I have for a couple of weeks still not solved.

Thanx for any answer,

Tom
