Hi,

Thanks for your reply.

I am glad to know the information is helpful.

I'd like to make a summary for this post:

Q: Can I to monitor the user's Internet Traffic Usage on SBS Standard Edition?

A: We can't find a specific user's Internet usage in the SBS Server Usage report. Some third party software or hardware route have such function, you can use the third party product to get the aim.

For future postings, I would like to list the following information as a guideline when submitting new posts in the future. This information will help us to understand the issue and situation more quickly. Thank you!

1. Has the server/client/product ever worked?
2. If so, what changed?
3. What service packs and updates were applied?
4. What are the steps to reproduce the problem?
5. Does it happen the same way on any other systems?
6. Please provide the exact error message with any screenshots, if possible.

If you need any assistance in the future, please feel free to post in our newsgroup.

Best regards,

Robert Li(MSFT)

Re: Monitoring a user's internet usage

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
