Hello Ben,

Have you tried the steps in my last reply?

If not, I suggest you have a try. For your convenience, I have included them below:

=====

Step 1:

=====

1. Open Server Management-->Advanced Management-->Internet Information Services-->ServerName-->Web Sites
2. Right click Default Web Site and click Properties.
3. Click ISAPI Filters tab.
4. Please check if URLScan is in the list. If yes, remove it.
5. Click OK and run iisreset.

If the issue persists, let's move on:

Step 2:

=====

1. Open Server Management-->Advanced Management-->Internet Information Services-->ServerName-->Web Sites-->Default Web Site.
2. Right click ConnectComputer and click Properties.
3. Select 'Scripts only' for Execute permissions
5. Click OK and run iisreset.
6. Check if the issue persists.

=====

If it does not help, I suggest you post the problem with detailed information in a new thread. I think the issue can be resolved more efficient in this way.

Thank you for your understanding.

Best regards,

RE: Add a server to SBS R2 using ConnectComputer

=====

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| I am having the same issue, this is a new install of SB Premium. To make it

| more interesting, it is only one computer that gives me this message. I have

| added computers before and after seeing it only for a client computer (Running xp pro). Help!!
