C: drive got changed to B:

How did you find out that C changed to B? Are you sure this is the problem?
I doubt that this is the problem since to my best knowledge drive letters
are meaningless.

I have never done this before, but I would think of few options

One would be this:

<http://support.microsoft.com/kb/69013>

The other

Can you download and make a bartpe (<http://www.nu2.nu/pebuilder/>) bootable
cd? if so, you can boot from the CD, and try to follow these steps

<http://windowsxp.mvps.org/peboot.htm>, however you will need to change the
system partition drive letter, see here,

<http://support.microsoft.com/kb/223188>

You can also use any linux live cd to do the same thing, if you know how to
mount NTFS in linux.

To my best knowledge drive letters are basically meaningless, so you can
also try this

Follow these instruction, <http://support.microsoft.com/kb/305595/EN-US>, and
try to boot.

You could also run a magnet over your disk and re-install

In linux, you mount devices, not drive letters.

Think about it...

:~)
